

SUPCO CANADA Locomotive Gears

High Quality Gears for Highly Valued Customers

Supco Canada Railway is capable of supplying the full range of carburized and hardened Traction Motor Pinion Gears and Axle Gears for different type of GE, EMD and Alstom Locomotives for railways around the globe.

Close to a century of the experience and reputation in manufacturing high quality gears for railways and mass transit, will assure all our customers of best performance and durability of gears they need. Our products will meet or exceeds the OEM standards and being utilized by our domestic and international customers for years.

We are also capable of reverse engineering and manufacturing of any type of Pinion and Axle Gears to OEM standard. Our engineering team is capable of modifications to enhance the quality to higher standard than the OEM specifications.

We are committed to serve our valued customers with the highest quality material at a competitive price, whenever they need it and wherever they need it.

Additional Capabilities

We are capable of re-qualifying and re-profiling the used bull gears to a certain degree of wear utilizing Cubic Boron Nitride Grinding Technology.

This Capability is highly advantageous to Railways around the globe as they could re-profile the bull gears and re-use them for another term with fraction of cost of brand new gears. We will provide our customers who are interested to re-profile their gears with relevant tools and special gauges and also provide training to their staff for qualifying the gears that could be re-profiled by using this unique capability.
